

Style Guide : Midnight

1. Logo:

Logo Usage: Main Menu, Start of Pages, Screen Corner

2. Iconography:

- Medieval Style
- Pixel Clean
- D&D Elements

Examples:

3. Color Scheme

FFFFFF
White

4. Typography

- **Font:** Caudex (stil medieval + modern) [Caudex - Google Fonts](#)
- **Color:** Black / White / Purple
- **Typography scales:** 3:4
- **Space between rows:** 12pt font -> Auto
- **Breakpoints**
 - Mobile Phone < 716p
 - SmartWatch - 400x400 px
 - VR Headset: 1920x1080px (landscape, fullscreen)
- **Spacing:** M 16px

5. Pages And Templates

The MidNight app uses a mobile page system built as compact, vertical screens optimized for quick interactions during a campaign. Each page keeps the same basic structure: logo or top bar at the top, a clear contextual title, main content organized into sections, and actions placed close to the area where they are relevant.

The main templates are:

Phone:

- **Auth pages:** Login and Register, with logo, a short atmospheric message, and simple fields.
- **Main menu:** The central navigation page, with primary actions such as New Campaign, Join Campaign, Characters, History, Social, and News.
- **Form pages:** Screens for creating a campaign, joining a campaign, and building a character, based on clear fields and large controls.
- **Lobby pages:** Transition pages before a campaign, with a summary of the table, players, and status.
- **Session pages:** Map, dashboard, quests, shop, and dice roll, designed for use during gameplay.
- **List/detail pages:** History, Characters, Running Campaigns, and Quests, where the user selects an item from a list and immediately sees details.

Watch:

- **Watch face / Home:** A quick main screen, with the campaign title *The Ashen Vault* and four large actions: Stats, Quest, Scan, and Dice.
- **Vitals pages:** Screens for quickly checking character status, with information such as Stamina, Hunger, Mana, and HP, displayed through easy-to-read visual bars.
- **Buff cards:** Cards for active effects, such as Magic Potion Buff, showing the bonus provided and the remaining time. The user can activate the effect or dismiss it quickly.
- **Notification cards:** Screens with campaign notifications, organized as cards: urgent quest, session reminder, and world news.
- **Quest action pages:** Screens for quick quests, where the player can accept, reject, or continue the action on the phone.
- **Loot radar / scan pages:** Screens for scanning the area, with radar-style visual feedback, showing detected items, distance, and risk level.
- **Dice roll pages:** Screens for quick dice rolls, with selection for D4, D6, D12, and D20, plus the action type, such as Attack or DMG.
- **Result pages:** Confirmation screens displaying the dice roll result, the status of an activated buff, or confirmation that a quest has been accepted.
- **Continue on phone pages:** Screens for transferring more complex actions to the phone app, such as the full map, inventory, or campaign details.

AR Headset:

The MidNight app on the AR headset uses a landscape screen system optimized for HUD display within the user's field of view. Each screen maintains the same base structure: AR corner brackets at the edges, status indicators in the top-right, main content centered, and a navigation bar at the bottom.

- **Boot screen:** An initialization screen with the AR-PI-GI logo centered, a loading bar, and connection status indicators: AR_LINK, GPS_SYNC, QUEST_DB.
- **Role screen:** A character selection screen, "Select your Character Sheet," displaying cards for Rogue, Warrior, Mage, and Bard, each with stats and abilities.
- **Quest screen:** The active HUD during gameplay, with a stats bar in the top-left, a floating quest marker in the center, teammate nameplates with HP bars, and quick action buttons in the bottom-right.

- **Loot screen:** A reward screen shown after quest completion, displaying XP gained, item received, and a level progress bar.
- **World screen:** An AR world reskinning screen, where the real environment is visually transformed into a medieval castle overlay, with character nameplates floating above real people nearby.
- **Map screen:** A 3D holographic map screen projected onto the real table surface, showing character and enemy minifigures, movement lines, turn indicators, and a voice command bar.

All pages must maintain the app's dark fantasy style, with consistent spacing, visible buttons, readable text, and a clear hierarchy between title, information, and actions.
